Question 1

1 out of 1 points

An attack that blocks access to a system by other users is called:

- Selected Answer: denial of service
- Answers: denial of service  
ethical hacking  
sniffing  
social engineering

Question 2

Needs Grading

Briefly explain how a biometric authentication system works.

Selected Answer:

A measurement of a biological feature is agreed upon as a standard.This feature is captured and digitally encoded. In many cases simplechecks are done to make sure that the biological feature is still "alive".Heat of a fingertip so as to not to be fooled by a mold. Eye movement so as to not be fooled by a photo. Etc, etc... Upon subsequent measurements this feature consistently returns with an acceptable range for the metric.
